

# calloutbox — colour gallery

## Built-in colour themes

Every theme sets the bar, background and heading colour together. Call it with `theme=<name>`.

|                                                                                     |                                                                                                               |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
|    | <b>theme=blue</b><br>Deep navy bar on a light blue-grey background. This is the default if no theme is given. |
|    | <b>theme=red</b><br>Strong red bar on a soft peach background.                                                |
|    | <b>theme=teal</b><br>Dark teal bar on a pale teal background.                                                 |
|    | <b>theme=green</b><br>Forest green bar on a light green background.                                           |
|   | <b>theme=purple</b><br>Deep purple bar on a faint lavender background.                                        |
|  | <b>theme=orange</b><br>Burnt orange bar on a warm cream background.                                           |
|  | <b>theme=slate</b><br>Blue-grey slate bar on a cool neutral background — a quiet, low-contrast option.        |

## Same themes, body only (no heading)

|                                                                                     |                   |
|-------------------------------------------------------------------------------------|-------------------|
|  | Body-only blue.   |
|  | Body-only red.    |
|  | Body-only green.  |
|  | Body-only orange. |

## Numbered markers

|     |                                                                                                                     |
|-----|---------------------------------------------------------------------------------------------------------------------|
| 1   | <b>First</b><br>Use <code>number=1</code> for a numeral instead of the dot.                                         |
| 2   | <b>Second</b><br>Each theme keeps its colours.                                                                      |
| A   | Alphabet, body only.                                                                                                |
| 1   | <b>Vertical number</b><br>Add <code>vertical</code> to rotate the numeral up the bar.                               |
| 12  | <b>Multi-digit</b><br>Works for any number, e.g. <code>number=12</code> , <code>vertical</code> .                   |
| ABC | <b>Multi-alphabet</b><br>Works for combination of alphabets, e.g. <code>number=ABC</code> , <code>vertical</code> . |

## Rounded corners

|   |                                                              |
|---|--------------------------------------------------------------|
| ● | <b>corners=rounded</b><br>The colored bar follows the curve. |
| ● | Custom radius with <code>arc=8pt</code> , body only.         |

## Drop shadow

|   |                                                                    |
|---|--------------------------------------------------------------------|
| ● | <b>shadow=on</b><br>A soft drop shadow lifts the box off the page. |
| ● | <b>Shadow + rounded</b><br>Combines with rounded corners.          |
| ● | Shadowed, body only.                                               |

## Custom one-off colours

If no theme fits, override any of `barcolor`, `bgcolor`, `headcolor` with any `xcolor` expression.

### Custom mix

Built from `xcolor` percentages.

### Override just one

Here only the bar is changed; the background and heading still come from `theme=blue`.

### Defined colours

Pass your own `\definecolor` names for brand palettes.
